

Full Stack Engineer.

DappLooker is the leading Web3 product company where innovation, design, and engineering meet scale. We use some of the latest technologies in the digital and web3 field to empower organizations in every aspect. DappLooker is trusted by a community of **5,000+ developers** and powers data for **15+ chains, 1000+ protocols**. Our partners include some of the industry best i.e. TheGraph, Aave, Polygon, Celo, Near, Connex, Peaq and More.

What we're looking for

We're looking for someone who not only possesses excellent problem-solving abilities but also has a deep understanding of Web3 technologies and decentralized infrastructure.

We are looking for a full stack engineer with deep understanding of UI frameworks, relational databases and modern data stacks, and a desire to code in typescript, rust. The backend Engineer at DappLooker will build our general purpose blockchain data systems and also contribute to our dependencies.

This is work from office position.

Location: We Work, Magarpatta City, Pune.

Responsibilities

- Proficiency in both frontend and backend development.
- Product minded and care deeply about crafting an exceptional user experience
- Proven track record of tackling complex challenges with innovative and straightforward solutions
- Experience in the following: React, NextJS, Nodejs, Typescript, GraphQL, PostgreSQL will be a bonus
- Actively work and improve DappLooker backend APIs, ETL capabilities.
- Familiarizing yourself with the backend codebase, Rest APIs, database models and ETL system.
- Write subgraphs, substreams and deploy on production.

- Develop an understanding of existing code and design choices, and then analyze how they can be experimented with and improved upon.
- Reviewing pull requests of your colleagues and taking responsibility for the reviewed code as if it were your own
- Participate in the design, building, testing, and automation of the development infrastructure.
- Cultivate a culture of learning by providing insight into performance and reliability at the development level.
- Minimise bottlenecks and automate repetitive tasks.
- Support, troubleshoot, and analyze code on all 3 layers of the stack related to infrastructure, middleware, and continuous integration and delivery frameworks.
- Documenting important aspects of the software.

What we Expect

- 2-8 years of hands-on experience in Web services and API development that have scaled to thousands of users.
- Understanding of subgraphs, graph protocol, smart contracts and Solidity will be add on.
- Familiarity with Ethereum EVM experience would be great.
- Should be good with JavaScript, Typescript, and ES6 standards.
- Hands-on with RDBMS, NoSQL, and databases like Postgres
- Experience working with REST and GraphQL APIs
- Experience in an Agile development environment.
- Familiarity with GitHub and any cloud preferably AWS.
- Understanding web3 protocols such as DeFi, NFTs, and DAOs are a plus, as well as SubGraphs.
- Experience working in team environment, helping them to resolve the issues.
- Strong automation and problem-solving skills and ability to follow through to completion
- Understanding of the Blockchain landscape is plus.

- Mission-driven and self-motivated.
- Strong oral and written communication with the ability to explain complex technical features in a language that can be understood by cross-functional counterparts and prospective clients
- Ability to develop the trust of potential partners' executives and influencers.
- Strong organization skills and attention to detail. Naturally positive, collaborative, easy going.

About Dapplooker

DappLooker is the only business intelligence and analytics hub empowering seamless transformation of web3 data into revenue. Access analytics across 15+ networks and analyze data from over 500M+ on-chain users.

We are a fast-growing blockchain analytics product company that helps decentralized applications analyze data produced by smart contracts.

We move fast, so a mindset for rapid test-and-learn is a must, along with a desire to work in (and understand) the analytics/blockchain space.

Benefits

- Mission-focused work experience.
- Competitive Salary.
- Medical Insurance.
- Access to any Udemy course.
- Flexible vacation policy.
